

To the Commission:

This addendum supplements my previously filed Motion to Dismiss. I believe the Commission's own regulations support my motion that the Commission lacks jurisdiction over power transmission lines inasmuch as spectral purity. That is, the Commission has determined RF to be 9 kHz to 300 GHz in Part 2 of the Commission's rules and regulations. Furthermore, given the manifest weight of evidence suggesting the BPL systems will produce chronic and irreparable damage to MF and HF communications, the Commission would be wise to avoid even the appearance of impropriety by tabling this rulemaking. Given the enormous degree of evidence against this proposal, without clear and convincing evidence that NO interference will be caused to licensed services, the Commission will appear to be corrupted by a hasty approval of this package - which appears to be motivated in part by special interests devoted to energy companies with close ties to the administration within the Executive Branch of this government. Not to be disrespectful, but this proposal and the speed with which the Commission has undertaken its approval makes the Commission look as if it is giving things away to certain energy companies in derogation of its technical duties to avoid interference. Again, I strongly advise the Commission to table this matter.

Respectfully Submitted:

/s./ James E. Whedbee, M.Ed.
